

Run Release 9.6 Regression (Stage) - ID: 789

Test run

5%	6 successful	0%	0 failures	95%	125 others
----	--------------	----	------------	-----	------------

Run ID	789
Project	Payments
State	Active: In progress
Milestone	Release 9.6
Tags	regression

Card Not Present (CNP) (17)

Regression

Test	Priority	Status
Validate that, CNP can process successful transactions with VISA Card.	Normal	Untested
Validate that, CNP can process successful transactions with AMEX Card.	Normal	Untested
Validate that, CNP can process successful transactions with Discover card.	Normal	Untested
Validate that, CNP can process successful transactions with MasterCard.	Normal	Untested
Validate that, CNP receives an error message when the CVV does not match.	Normal	Untested
Validate that, CNP receives an error message when the Zipcode does not match.	Normal	Untested
Validate that, CNP receives an error message when card is expired	Normal	Untested
Validate that, the correct Transaction Amount is stored in the [Payments].[Payments] DB table.	Normal	Untested
Validate that, the correct PaymenTypeMethod is stored for the new payment transaction in the [Payments].[Payments] DB table	Normal	Untested
Validate that, a partial refund is able to get successfully processed for CNP transaction	Normal	Untested
Validate that, the correct partial refund Amount and TransactionID is stored in the [Payments].[Refunds] table	Normal	Untested
Validate that, a void transaction (Full refund under the same day window) is able to get successfully processed for CNP transaction	Normal	Untested
Validate that, the correct void amount and transactionID is stored in the [Payments].[Voids] table	Normal	Untested

📄 Validate that, CNP with Wellfit GUID can process successful transactions with VISA Card.	⦿ Normal	Untested
📄 Validate that, CNP with Wellfit GUID can process successful transactions with AMEX Card.	⦿ Normal	Untested
📄 Validate that, CNP with Wellfit GUID can process successful transactions with DISCOVER Card.	⦿ Normal	Untested
📄 Validate that, CNP with Wellfit GUID can process successful transactions with Master Card.	⦿ Normal	Untested

Wellfit Provisioning (9)

Regression

Test	Priority	Status
📄 Verify that, from Wellfit Provisioning authenticate API is working 200 ok	⦿ Normal	Passed
📄 Verify that, from Wellfit Provisioning, create new submerchant API is working 200 ok	⦿ Normal	Passed
📄 Verify that, from Wellfit Provisioning collection, create update submerchant API is working 200 ok	⦿ Normal	Passed
📄 Verify that, from Wellfit Provisioning collection, create read submerchant API is working 200 ok	⦿ Normal	Passed
📄 Verify that, from DB Payments.Submerchant's table, created new submerchant is logged and stored correctly	⦿ Normal	Passed
📄 Verify that, from Wellfit Provisioning, read merchant category codes API returns 200 OK	⦿ Normal	Passed
📄 Verify that, from Wellfit Provisioning, create merchant category code API returns 200 OK	⦿ Normal	Untested
📄 Verify that, from Wellfit Provisioning, delete merchant category code API returns 200 OK	⦿ Normal	Untested
📄 Verify that, when a new sub-merchant is created, its merchant category code is stored and matches MerchantCategoryCodes	⦿ Normal	Untested

Card Present (CP) (5)

Regression

Test	Priority	Status
📄 Ensure, CP endpoint (/credit-card-present/charge-card) is able to make successfull payment with any payment device	⦿ Normal	Untested
📄 Ensure, CP endpoint is able to return token guid in the response	⦿ Normal	Untested
📄 Ensure, Refunds are working fine for CP transactions	⦿ Normal	Untested
📄 Ensure, voids are working fine for CP transactions	⦿ Normal	Untested
📄 Ensure, CP end point returns transactionid with dash (-) (ex: 508616192-1588)	⦿ Normal	Untested

PAY-1128 MyWallet: Adding New Cards (8)

Regression > Wallet

Test	Priority	Status
📄 Verify that, authenticate API req res is successful	⦿ Normal	Untested
📄 Verify that, create-wallet API req res retrieves a successful response	⦿ Normal	Untested
📄 Verify that, a new card token can be added to a Wallet via API	⦿ Normal	Untested
📄 Verify that executing a query from the Wallet DB will retrieve the Wallet and Card token logs	⦿ Normal	Untested
📄 Verify that, card number, expiration date, CVV, zip/postal code, input validations errors are returned via API	⦿ Normal	Untested
📄 Verify that, create-card token API returns a confirmation response after successfully adding a new card	⦿ Normal	Untested
📄 Verify that the card token generation is logged in the DB	⦿ Normal	Untested
📄 Validate Wallet Tokenize Transaction - TokenId Stored in Wallet DB	⦿ Normal	Untested

PAY-1127 MyWallet: Removing Stored Cards (7)

Regression > Wallet

Test	Priority	Status
 Verify that, delete-token API for credit cards request response is successful	 Normal	
 Verify that, a card token cannot be deleted without authentication	 Normal	
 Verify that, attempting to delete a token linked to an active subscription retrieves an error message	 Normal	
 Verify that, attempting to delete a card token linked to an active payment plans retrieves an error message	 Normal	
 Verify that, a clear error message is displayed when card token cannot be deleted from the Wallet	 Normal	
 Verify that, all types of cards can be deleted via API	 Normal	
 Verify that, once a deleted card token is removed, the details are also removed from the Wallet DB	 Normal	

TokenVault (13)

Regression

Test	Priority	Status
 Ensure CNP V1 endpoint is able to make a successful payment with processor token	 Normal	
 Ensure CNP V1 endpoint is able to make a successful payment with token GUID	 Normal	
 Ensure, CNP V1 endpoint is able to make a successful payment with paypageID	 Normal	
 Ensure, Token is not saved into tokenvalut DB when CNP V1 endpoint runs with processor token (Right now not saving in future it might be saved)	 Normal	
 Ensure, CP V1 endpoint returns token GUID in the response	 Normal	
 Ensure, CNP V1 endpoint is able to make a successful payment with token GUID which returns on CP response	 Normal	
 Ensure, Token is able to save into tokenvalut DB when CP V1 endpoint runs	 Normal	
 Ensure, Token is able to add successfully and able to save into token valut DB when tokenVaultAPI/add-token end point runs	 Normal	
 Ensure, CNP V2 (v2/cnp/charge) endpoint is able to make a successful payment with processor token	 Normal	
 Ensure, CNP V2 (v2/cnp/charge) endpoint is able to make a successful payment with token GUID'	 Normal	
 Ensure, CNP V2 (v2/cnp/charge) endpoint is able to make a successful payment with paypageid	 Normal	
 Ensure, token is able to save into tokenvallt DB when CNP V2 end point runs with processor token (If token is not present in DB it will save . If token is already there it will not save)	 Normal	
 Ensure that, CP charge card API retrieves Wellfit Token GUID as "cardToken" value response	 Normal	

EX8000 (1)

Regression

Test	Priority	Status
 Verify transaction successful on EX8000 device	 Normal	

Bug/HotFix* PAY-2603 Card Token Vault Fails to Return Wellfit Token (12)

Regression

Test	Priority	Status
 Verify that, Add Token API works successfully without cardZipCode	 Normal	
 Validate that, a token is created successfully when cardZipCode is provided	 Normal	

 Validate that, the API accepts a request when cardZipCode is sent as an empty string	 Normal	Untested
 Validate that, the API rejects invalid cardZipCode values	 Normal	Untested
 Validate that, the API no longer fails when cardZipCode is omitted	 Normal	Untested
 Validate that, the Token Vault generates and returns a Wellfit token for a valid CP charge API request without ZipCodeField	 Normal	Untested
 Validate that, Wellfit Token retrieved in CP charge API response is stored in Token Vault dbo Tokens table	 Normal	Untested
 Validate that, a Wellfit token is generated successfully for a valid CNP request with ZipCodeField	 Normal	Untested
 Validate that, Wellfit Token retrieved in CNP API response is stored in Token Vault dbo Tokens table	 Normal	Untested
 Validate that, a Wellfit token is generated successfully for a valid CNP request without ZipCodeField	 Normal	Untested
 Validate that, a transaction is generated successfully for a valid CNP request with Wellfit Token	 Normal	Untested
 Validate that, the Token Vault returns a Processor token and generates a DevOps alert when Wellfit token generation fails for a CP request	 Normal	Untested

 Treasury (1)

Regression

Test	Priority	Status
 Verify that Funding and Settlement are skipped on holidays and processed on the next business day	 Normal	Untested

 CP Payment - Settlement and Funding - Treasury (9)

Regression > Treasury

Test	Priority	Status
 Validate that POST CP /payments API is 200 OK	 Normal	Untested
 Validate that CP Payment can be successfully sent to the system	 Normal	Untested
 Validate that CP transaction is successfully stored as 'Approved' in Payments DB	 Normal	Untested
 Validate that CP transaction gets "SettlementDate" value filled via query through Payments DB Table	 Normal	Untested
 Validate that POST treasury/create-funding-batch API can be successfully executed 202 OK	 Normal	Untested
 Validate that "FundingInstructions" and "SettlementDate" are not NULL for CNP transaction in Payments DB Table after creating FundingBatch via API	 Normal	Untested
 Validate that Payments.FundingInstructions Table contains proper co-relation of "FIPC-PayFac", "FISC-NetSettlement" and "Id" against "fundingInstructionId". "PayFacFee" and "Amount" values from Platform Payments.Payments DB	 Normal	Untested
 Validate that POST treasury/send-funding-batch API can be successfully executed 202 OK	 Normal	Untested
 Validate that Payments.FundingBatches Table contains proper "BatchFileName" value after sending funding batch via API	 Normal	Untested

 CP Refund - Settlement and Funding - Treasury (9)

Regression > Treasury

Test	Priority	Status
 Validate that POST CP /payments API is 200 OK	 Normal	Untested
 Validate that CP partial refund can be successfully sent to the system	 Normal	Untested
 Validate that CP partial refund is successfully stored as 'Approved' in Payments DB	 Normal	Untested
 Validate that CP partial refund gets "SettlementDate" value filled via query through Payments DB Table	 Normal	Untested

 Validate that POST treasury/create-funding-batch API can be successfully executed 202 OK	 Normal	Untested
 Validate that "FundingInstructions" and "SettlementDate" are not NULL for CP partial refund in Payments DB Table after creating FundingBatch via API	 Normal	Untested
 Validate that Payments.FundingInstructions Table contains proper co-relation of "FIPC-PayFac", "FISC-NetSettlement" and "Id" against "fundingInstructionId". "PayFacFee" and "Amount" values from Platform Payments.Payments DB	 Normal	Untested
 Validate that POST treasury/send-funding-batch API can be successfully executed 202 OK	 Normal	Untested
 Validate that Payments.FundingBatches Table contains proper "BatchFileName" value after sending funding batch via API	 Normal	Untested

CNP Payment - Settlement and Funding - Treasury (9)

Regression > Treasury

Test	Priority	Status
 Validate that POST CNP /payments API is 200 OK	 Normal	Untested
 Validate that CNP Payment can be successfully sent to the system	 Normal	Untested
 Validate that CNP transaction is successfully stored as 'Approved' in Payments DB	 Normal	Untested
 Validate that CNP transaction gets "SettlementDate" value filled via query through Payments DB Table	 Normal	Untested
 Validate that POST treasury/create-funding-batch API can be successfully executed 202 OK	 Normal	Untested
 Validate that "FundingInstructions" and "SettlementDate" are not NULL for CNP transaction in Payments DB Table after creating FundingBatch via API	 Normal	Untested
 Validate that Payments.FundingInstructions Table contains proper co-relation of "FIPC-PayFac", "FISC-NetSettlement" and "Id" against "fundingInstructionId". "PayFacFee" and "Amount" values from Platform Payments.Payments DB	 Normal	Untested
 Validate that POST treasury/send-funding-batch API can be successfully executed 202 OK	 Normal	Untested
 Validate that Payments.FundingBatches Table contains proper "BatchFileName" value after sending funding batch via API	 Normal	Untested

CNP Refund - Settlement and Funding - Treasury (9)

Regression > Treasury

Test	Priority	Status
 Validate that POST CNP /payments API is 200 OK	 Normal	Untested
 Validate that CNP partial refund can be successfully sent to the system	 Normal	Untested
 Validate that CNP partial refund is successfully stored as 'Approved' in Payments DB	 Normal	Untested
 Validate that CNP partial refund gets "SettlementDate" value filled via query through Payments DB Table	 Normal	Untested
 Validate that POST treasury/create-funding-batch API can be successfully executed 202 OK	 Normal	Untested
 Validate that "FundingInstructions" and "SettlementDate" are not NULL for CNP partial refund in Payments DB Table after creating FundingBatch via API	 Normal	Untested
 Validate that Payments.FundingInstructions Table contains proper co-relation of "FIPC-PayFac", "FISC-NetSettlement" and "Id" against "fundingInstructionId". "PayFacFee" and "Amount" values from Platform Payments.Payments DB	 Normal	Untested
 Validate that POST treasury/send-funding-batch API can be successfully executed 202 OK	 Normal	Untested
 Validate that Payments.FundingBatches Table contains proper "BatchFileName" value after sending funding batch via API	 Normal	Untested

ACH Payment - Settlement and Funding - Treasury (10)

Regression > Treasury

Test	Priority	Status
 Validate that POST /payments/authenticate API is 200 OK	 Normal	Untested
 Validate that ACH Payment can be successfully sent to the system	 Normal	Untested
 Validate that ACH transaction is successfully stored as status 3 'Approved' in Payments and Platform DB Tables	 Normal	Untested
 Validate that ACH transaction gets "SettlementDate" value filled via query through Payments DB Table	 Normal	Untested
 Validate that POST treasury/create-funding-batch API can be successfully executed 202 OK	 Normal	Untested
 Validate that "FundingInstructions" and "SettlementDate" are not NULL for ACH transactionid in Payments DB Table after creating FundingBatch via API	 Normal	Untested
 Validate that Payments.FundingInstructions Table contains proper co-relation of "FIPC-PayFac", "FISC-NetSettlement" and "Id" against "fundingInstructionId". "PayFacFee" and "Amount" values from Platform Payments.Payments DB	 Normal	Untested
 Validate that ACH transaction is successfully stored as status 5 'Funded' in Payments DB Tables	 Normal	Untested
 Validate that POST treasury/send-funding-batch API can be successfully executed 202 OK	 Normal	Untested
 Validate that Payments.FundingBatches Table contains proper "BatchFileName" value after sending funding batch via API	 Normal	Untested

ACH Refund - Settlement and Funding - Treasury (12)

Regression > Treasury

Test	Priority	Status
 Validate that POST /payments/authenticate API is 200 OK	 Normal	Untested
 Validate that ACH Refund with new payment transaction can be successfully sent to the system	 Normal	Untested
 Validate that ACH Refund with existent payment transaction can be successfully sent to the system	 Normal	Untested
 Validate that ACH partial refund is successfully stored as status 'Partial Refund' 18 in Payments and Platform DB Tables	 Normal	Untested
 Validate that ACH full refund is successfully stored as status 'Full Refund' 10 in Payments and Platform DB Tables	 Normal	Untested
 Validate that ACH refund gets "SettlementDate" value filled via query through Payments/Platform DB Table	 Normal	Untested
 Validate that POST treasury/create-funding-batch API can be successfully executed 202 OK	 Normal	Untested
 Validate that "FundingInstructions" and "SettlementDate" are not NULL for ACH Refund in Payments DB Table after creating FundingBatch via API	 Normal	Untested
 Validate that ACH Refund is successfully stored as status 5 'Funded' in Payments DB Tables	 Normal	Untested
 Validate that Payments.FundingInstructions Table contains proper co-relation of "FIPC-PayFac", "FISC-NetSettlement" and "Id" against "fundingInstructionId". "PayFacFee" and "Amount" values from Platform Payments.Payments DB	 Normal	Untested
 Validate that POST treasury/send-funding-batch API can be successfully executed 202 OK	 Normal	Untested
 Validate that Payments.FundingBatches Table contains proper "BatchFileName" value after sending funding batch via API	 Normal	Untested
