Attachments:	2026-07-10-merchant-provisioning-info.sql				
Issue links:	Relates relates to PAY-4088 WorldPay PayFac error hygiene — stop ... Backlog				
Sub-tasks:	Key	Summary	Type	Status	Assignee
	PAY-4078	DEV - Research - Analyze CN/MP error ...	Sub-task	Done	Brett Roy
	PAY-4093	DEV - Eval CN Handling Return	Sub-task	In Progress	Brett Roy
	PAY-4106	QA: Create Test Cases	Sub-task	To Do	
	PAY-4107	QA: Test in Stage	Sub-task	To Do	
Acceptance Criteria:	- Current CN/MP error flow is reviewed. - Root cause is confirmed. - Recommended approach is documented. - Follow-up implementation story/stories are created if needed.				
Sprint:	PAY-Sprint 17				
Story point estimate:	3				

Description

Investigate why CN/Wellfit Connect shows a generic “Could not find requested object” error when Merchant Provisioning cannot find a merchant/legal entity in WorldPay Cert.

In lower environments, sbbox/pre-prod may contain sanitized production merchant data that does not exist in WorldPay Cert, causing the lookup to fail.

Scope:

Determine the correct error-handling approach between MP and CN:

- Should MP return a more specific lookup failure error?
- Should CN translate/display that error in a clear, actionable way?
- Should both layers require changes?

Comment by Brett Roy [07/Jul/26]

This only handles a specific instance of a worldpay generic error
Research of generic errors and generation of  [PAY-4088](#) [BACKLOG](#)
Increased SP to 3

Comment by [Brett Roy](#) [09/Jul/26]

Example return ...

```
{
  "validationErrors": [
    {
      "code": "WorldPay.ObjectNotFound",
      "data": null,
      "message": "legal entity 83999715764802436 was not found in WorldPay eCommerce (Cert). In lower environments this usually means the record exists in the database (sanitized production data) but was never provisioned in WorldPay eCommerce (Cert).",
      "type": "Input"
    }
  ],
  "message": "legal entity 83999715764802436 was not found in WorldPay eCommerce (Cert). In lower environments this usually means the record exists in the database (sanitized production data) but was never provisioned in WorldPay eCommerce (Cert).",
  "data": {},
  "innerException": null,
  "helpLink": null,
  "source": null,
  "hResult": -2146233079,
  "stackTrace": null
}
```

Comment by [Brett Roy](#) [09/Jul/26]

[Swetha Bayya](#)

This should get tested by QA but as a SPIKE, it does not have that field

Comment by [Shikha Atal](#) [09/Jul/26]

[Ana Oliva \(contractor\)](#) [Radhika Kandoori](#) [Christopher Ariel Valenzuela Medina](#) can you please test this. Please create a QA sub task. If it is a quick testing, lets do it and close it.

[Swetha Bayya](#) [Andy Holtsclaw](#) It was a SPIKE but needs to be tested. Since the right status is not available for tracking, do you think it will be useful to convert this to a user story?

Comment by [Andy Holtsclaw](#) [09/Jul/26]

[Brett Roy](#) were actual changes checked in from this Spike? Would  [PAY-4088](#) [BACKLOG](#) be a testable story that would validate this item's work?

[Shikha Atal](#) QA has their priorities and would test this item in turn.

Comment by [Shikha Atal](#) [09/Jul/26]

[Ana Oliva \(contractor\)](#) [Radhika Kandoori](#) [Christopher Ariel Valenzuela Medina](#)Kindly ignore my request and follow the priority list for testing.

Comment by [Brett Roy](#) [10/Jul/26]

Legal Entity - eCommerce (Cert)

```
{
  "validationErrors": [
    {
      "code": "WorldPay.ObjectNotFound",
      "data": null,
      "message": "legal entity 83999715764802774 was not found in WorldPay eCommerce (Cert). In lower environments this usually means the record exists in the database (sanitized production data) but was never provisioned in WorldPay eCommerce (Cert).",
      "type": "Input"
    }
  ],
  "message": "legal entity 83999715764802774 was not found in WorldPay eCommerce (Cert). In lower environments this usually means the record exists in the database (sanitized production data) but was never provisioned in WorldPay eCommerce (Cert).",
  "data": {},
  "innerException": null,
  "helpLink": null,
  "source": null,
  "hResult": -2146233079,
  "stackTrace": null
}
```

SubMerchant - eCommerce (Cert)
will be similar but say SubMerchant

SubMerchant - CORE(Cert)
will be similar but say CORE(cert)

We will likely make a slight tweak to not include the 'in lower environment' comment in non lower environments, i.e. PROD
I will fix that up once you test to see if you find anything else

Comment by [Brett Roy](#) [10/Jul/26]

Tests - Use Merchant Provisioning script ...

Create a new and fresh SubMerchant for testing ... you do not have to but it is cleanest way to test this in case the data you have is stale or an improper merchant

/*
Search for SubMerchant - Use name partial and manually select - this will drive the find
SELECT *
FROM Payments.SubMerchants
WHERE SubMerchantName LIKE '%North Seattle%'

[2026-07-10-merchant-provisioning-info.sql](#)

You can change the errors by messing with the values

```
-- ecommerce

UPDATE MerchantProvisioning.ProvisionedLegalEntityProviders
SET ProcessorReference = '83999715764802775' -- 83999715764802775
WHERE Id = 'FF890000-523E-7C1E-0A9C-08DEDEB0AA0E'

UPDATE MerchantProvisioning.ProvisionedSubMerchantProviders
SET ProcessorReference = '83999715764818219' -- 83999715764818219
WHERE Id = 'FF890000-523E-7C1E-1591-08DEDEB0AA11'

-- CORE

UPDATE MerchantProvisioning.ProvisionedSubMerchantProviders
SET ProcessorReference = '112963250' -- 112963250
WHERE Id = 'FF890000-523E-7C1E-576F-08DEDEB0C174'
```

Comment by [Brett Roy](#) [10/Jul/26]

[Ana Oliva \(contractor\)](#) [Christopher Ariel Valenzuela Medina](#) [Radhika Kandoori](#)

Some testing stuff added below, should give you everything you need to use Postman and test the retrieve ...

[Andy Holtsclaw](#) [Swetha Bayya](#)

Comment by [Brett Roy](#) [13/Jul/26]

[Ana Oliva \(contractor\)](#) [Radhika Kandoori](#) [Christopher Ariel Valenzuela Medina](#)

I think everything you need is here to test - I will assume this one is good to go unless I hear back
